

# INTER-OFFICE COMMUNICATION

TO: File \_\_\_\_\_ DATE: July 8, 1982

FROM: <sup>(KH)</sup> Karen Heyob, Engineering Section, DHMM

SUBJECT: Modification to Permit #02-18-0091 dated April 23, 1982

U.S. Steel Corporation, Cuyahoga Plant, has submitted a request to modify the above referenced hazardous waste permit. This modification would allow:

- 1) various administrative changes,
- 2) the addition of F002 waste to the storage permit, and
- 3) reduction of the estimated annual quantity of K062 handled.

The facility has submitted a complete revised Part A.

The request for the addition of F002 waste to the permit is due to the purchase of a new photocopying machine. The waste is spent solvent from the photocopying machine. The facility originally listed this waste as a U210 waste. Since the waste is a spent solvent, it must be classified using the F002 designation. A telephone conversation with Mr. Mike Shack of U.S. Steel on June 4, 1982 confirmed this change.

The reduction in the annual estimated quantity of K062 is legitimate . per 3745-52-34 OAC. The facility now sends their K062 waste to a POTW. Between shipments, it is stored in the tanks for periods of less than 90 days. The new estimated annual quantity represents the amount they feel they may be required to store for more than 90 days in the event that they are required to find a new POTW because the one they are currently using stops accepting the waste.

The facility has not requested either increased container storage nor decreased tank storage. The annual estimated amount of F002 waste is very small, and does not require increased container storage capacity. The facility will continue to use the tanks presently on-site for temporary K062 storage.

The technical review of this modification request has been completed. The modification is in compliance with the applicable regulations and, therefore, is recommended for approval. The Northeast District Office has recently completed an inspection of this facility and is in agreement with this recommendation. Both the facility and the Northeast District Office have been notified that all facility documents must be revised as needed if the modification is approved.

FROM: Paul Flanagan, Manager, Engineering Section thru ~~Chuck Wilhelm~~, Chief, DHMM  
SUBJECT: Recommended Action for Modification to Permit #02-18-0091

We have reviewed the modification request for Permit #02-18-0091 which was issued to:

Company Name U.S. Steel Corp., Cuyahoga Plant

Address 1807 East 28th Street

Lorain, Ohio 44055

This modification was received by DHMM on April 27, 1982 and proposes the following change(s):

- 1) various administrative changes,
- 2) the addition of F002 waste to the storage permit, and
- 3) a reduction in the estimated annual quantity of K062 waste handled.

The technical review of this modification has been completed for conformance with applicable Ohio EPA regulations.

Therefore, having found this modification to be (in compliance/~~not in compliance~~) with applicable Ohio EPA regulations, we recommend:

X APPROVAL

       DENIAL

Approval ~~conditions~~/comments:

Please see attached change in the revised Part A submitted to DHMM and IOC concerning the review of the modification request.

This recommendation is contingent upon the receipt of a revised page 3 of 5 from the facility indicating the following change:

Form 3510-3 IV-A line 3-U210 should be replaced by F002
